

## Design And Installation Considerations:

This technical bulletin will provide you with data required to correctly size your soil stack and waste run outs.

### Sizing Of Vertical Soil Stacks

To correctly size a soil stack firstly we need to calculate the waste water flow rate. This is done using the following calculation:

$$Q_{WW} = K \sqrt{\Sigma DU}$$

where:

**Q<sub>WW</sub>** = Waste water flowrate (L/s)

**K** = Frequency factor (see Table B)

**ΣDU** = Sum of discharge units (see Table A)

Table A: Discharge units (DU) Values

| Appliance                  | System III DU l/s |
|----------------------------|-------------------|
| Wash basin, bidet          | 0.3               |
| Shower without plug        | 0.4               |
| Shower with plug           | 1.3               |
| Single urinal with cistern | 0.4               |
| Urinal with flushing valve | -                 |
| Slab urinal                | 0.2*              |
| Bath                       | 1.3               |
| Kitchen sink               | 1.3               |
| Dishwasher (household)     | 0.2               |
| Washing machine up to 6kg  | 0.6               |
| Washing machine up to 12Kg | 1.2               |
| WC with 4.0L cistern       | **                |
| WC with 6.0L cistern       | 1.2 to 1.7***     |
| WC with 7.5L cistern       | 1.4 to 1.8***     |
| WC with 9.0L cistern       | 1.6 to 2.0***     |
| Floor gully DN 50          | -                 |
| Floor gully DN 70          | -                 |
| Floor gully DN 100         | -                 |

\* Per person.

\*\* Not permitted.

\*\*\* Depending upon type (valid for WC's with siphon flush cistern only).

Table B: Typical frequency factors (K)

| Usage of appliances  | K   |
|--|-----|
| Intermittent use, e.g. in dwelling, guest-house, office      | 0.5 |
| Frequent use, e.g. in hospital, school, restaurant, hotel    | 0.7 |
| Congested use, e.g. in toilets and/or showers open to public | 1.0 |
| Special use, e.g. laboratory                                 | 1.2 |

## Soil Stack and Branch Pipe Sizing

## Technical Bulletin

Bulletin 8

2014

P2

10 storey building with  
 4 WC  
 2 WHB  
 2 Baths  
 2 Showers  
 2 Sinks  
 2 W/MC

On each floor

$$\begin{aligned}
 4 \times 1.5 &= 6.0 \\
 2 \times 0.3 &= 0.6 \\
 2 \times 1.3 &= 2.6 \\
 2 \times 0.4 &= 0.8 \\
 2 \times 1.3 &= 2.6 \\
 2 \times 0.6 &= 1.2 \\
 13.8 \times 10 &= 138 \text{ DU}
 \end{aligned}$$

Domestic Building Use K = 0.5

$$0.5 \sqrt{138} = 5.87 \text{ l/s}$$

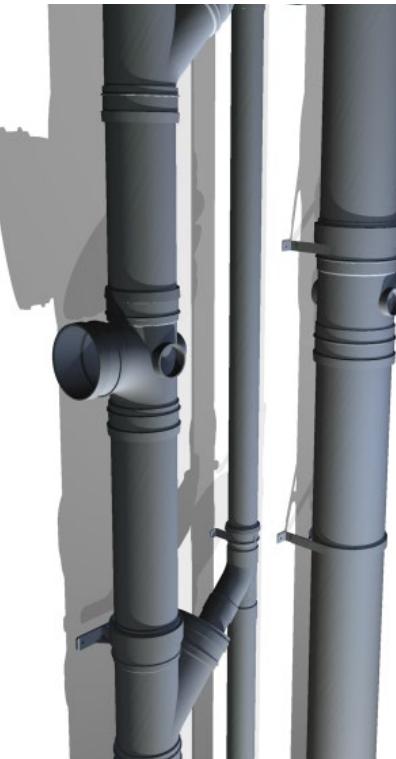

Table C: Stack with only Primary Vent

| Stack & Stack Vent | System I, II, III, IV Q max (L/s) |               |  |
|--------------------|-----------------------------------|---------------|--|
| DN                 | Square # entries                  | Swept entries |  |
| 60                 | 0.5                               | 0.7           |  |
| 70                 | 1.5                               | 2.0           |  |
| 80*                | 2.0                               | 2.6           |  |
| 90*                | 2.7                               | 3.5           |  |
| 100**              | 4.0                               | 5.2           |  |
| 125                | 5.8                               | 7.6           |  |
| 150                | 9.5                               | 12.4          |  |
| 200                | 16.0                              | 21.0          |  |

\* Minimum size where WC's are connected in system II.

\*\* Minimum size where WC's are connected in system I, III, IV. # Equal branch junctions that are more than 45°, or has a centre line radius less than the internal pipe diameter.

Table D: Stack with Secondary Venting

| Stack & Stack Vent | Secondary Vent | System I, II, III, IV Q max (L/s) |               |
|--------------------|----------------|-----------------------------------|---------------|
| DN                 | DN             | Square # entries                  | Swept entries |
| 60                 | 50             | 0.7                               | 0.9           |
| 70                 | 50             | 2.0                               | 2.6           |
| 80*                | 50             | 2.6                               | 3.4           |
| 90*                | 50             | 3.5                               | 4.6           |
| 100**              | 50             | 5.6                               | 7.3           |
| 125                | 70             | 7.6                               | 10.0          |
| 150                | 80             | 12.4                              | 18.3          |
| 200                | 100            | 21.0                              | 27.3          |

\* Minimum size where WC's are connected in system II.

\*\* Minimum size where WC's are connected in system I, III, IV. # Equal branch junctions that are more than 45°, or has a centre line radius less than the internal pipe diameter.

Using this example with a calculated flow rate of 5.87 L/s there are two options. The first option is to install a primary stack which has a diameter of 125mm; in the UK this would generally be installed as a 160mm stack. The other option would be to install a 110mm primary stack with 50mm secondary ventilation.

## Sizing of Branch Discharge Pipes

For branch pipe sizing the following sizing charts should be used.

| Appliance  | Dia.<br>DN | Min.<br>trap seal<br>depth<br>(mm) | Max. length<br>(L) of pipe<br>from trap<br>outlet to<br>stack (m) | Pipe<br>gradient  | Max.<br>no. of<br>bends | Max.<br>drop<br>(H)<br>(m) |
|--|------------|------------------------------------|---|-------------------|-------------------------|----------------------------|
| <b>Limitations for unventilated branch discharge pipes, system III</b> |            |                                    |   |                   |                         |                            |
| Washbasin, bidet<br>(30mm diameter trap)                               | 30         | 75                                 | 1.7   | 2.2 <sup>1)</sup> | 0                       | 0                          |
| Washbasin, bidet<br>(30mm diameter trap)                               | 30         | 75                                 | 1.1   | 4.4 <sup>1)</sup> | 0                       | 0                          |

- 1) Steeper gradient permitted if pipe is less than maximum permitted length.
- 2) If length is greater than 3m noisy discharge may result with an increased risk of blockage.
- 3) Should be as short as possible to limit problems with deposition.
- 4) Sharp throated bends should be avoided.
- 5) For slab urinal for up to 7 persons. Longer slabs to have more than one outlet.
- 6) Swept-entry branches serving WC's.
- 7) Includes small potato-peeling machines.
- 8) Tubular not bottle or resealing traps.
- 9) Spray tap basins shall have flush-grated wastes without plugs.

**Ventilated discharge branches:** Sizes and limitations upon the use of ventilated discharge branches are given in the tables above.

Limitations given in the second table are simplifications, for further information see national and local regulations and practice.

- 1) For maximum distances from trap to vent (see Figure 8 of BS EN 1205-2:2000).
- 2) If length is greater than 3m noisy discharge may result with an increased risk of blockage.
- 3) Should be as short as possible to limit problems with deposition.
- 4) Sharp throated bends should be avoided.
- 5) For slab urinal for up to 7 persons. Longer slabs to have more than one outlet.
- 6) Swept-entry branches serving WC's.
- 7) Includes small potato-peeling machines.
- 8) Tubular not bottle or resealing traps.
- 9) See Figure 9 of BS EN 12056-2:2000.
- 10) Every basin shall be individually ventilated.
- 11) Any number.
- 12) Spray tap basins shall have flush-grated wastes without plugs.
- 13) The size of ventilating pipes to branches from appliances can be DN 25 but, if they are longer than 15m or contain more than five bends, a DN 30 pipe shall be used.
- 14) If the connection of the ventilating pipe is liable to blockage due to repeated splashing or submergence, it should be DN 50, up to 50mm above the spill-over of the appliance.
